

Creator payments, settled by milestone.

Arc Creator Settlement v0.3

A working Arc Testnet escrow with Circle Wallets, programmable USDC releases, and public onchain receipts.

LIVE PROOF

0.25

USDC released

Arc Testnet
Block 59,934,707
Receipt verified

Cross-border project work still settles outside the agreement

The contract, delivery approval, payment rail, and proof of payment usually live in separate systems.

01	Agreement	Terms live in chat, docs, or a marketplace database.
02	Delivery	Milestones are approved manually and inconsistently.
03	Payment	Bank rails add delay, FX friction, and reconciliation.
04	Proof	Receipts are platform records—not independently verifiable.

One escrow makes milestone releases verifiable

The same state powers settlement operations and the public receipt.

Arc settles; Circle authorizes the wallet

No seed phrase is handled by the app. The server uses Circle credentials; secrets never enter the browser bundle.

The v0.3 path is deployed and exercised end to end

1 USDC

Escrow funded

0.25 USDC

Milestone released

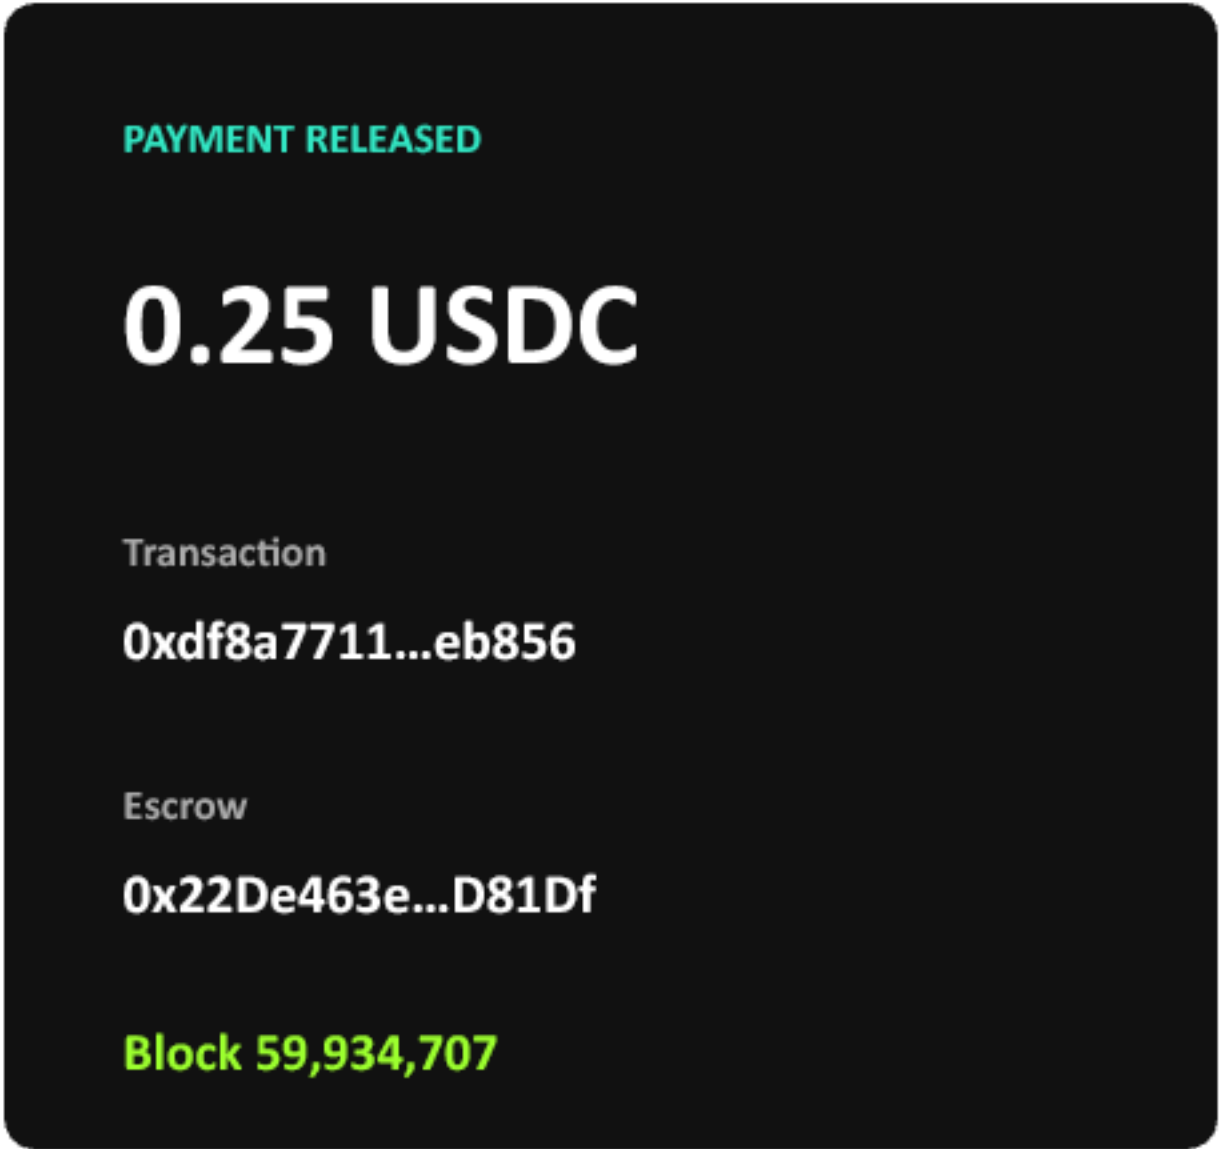

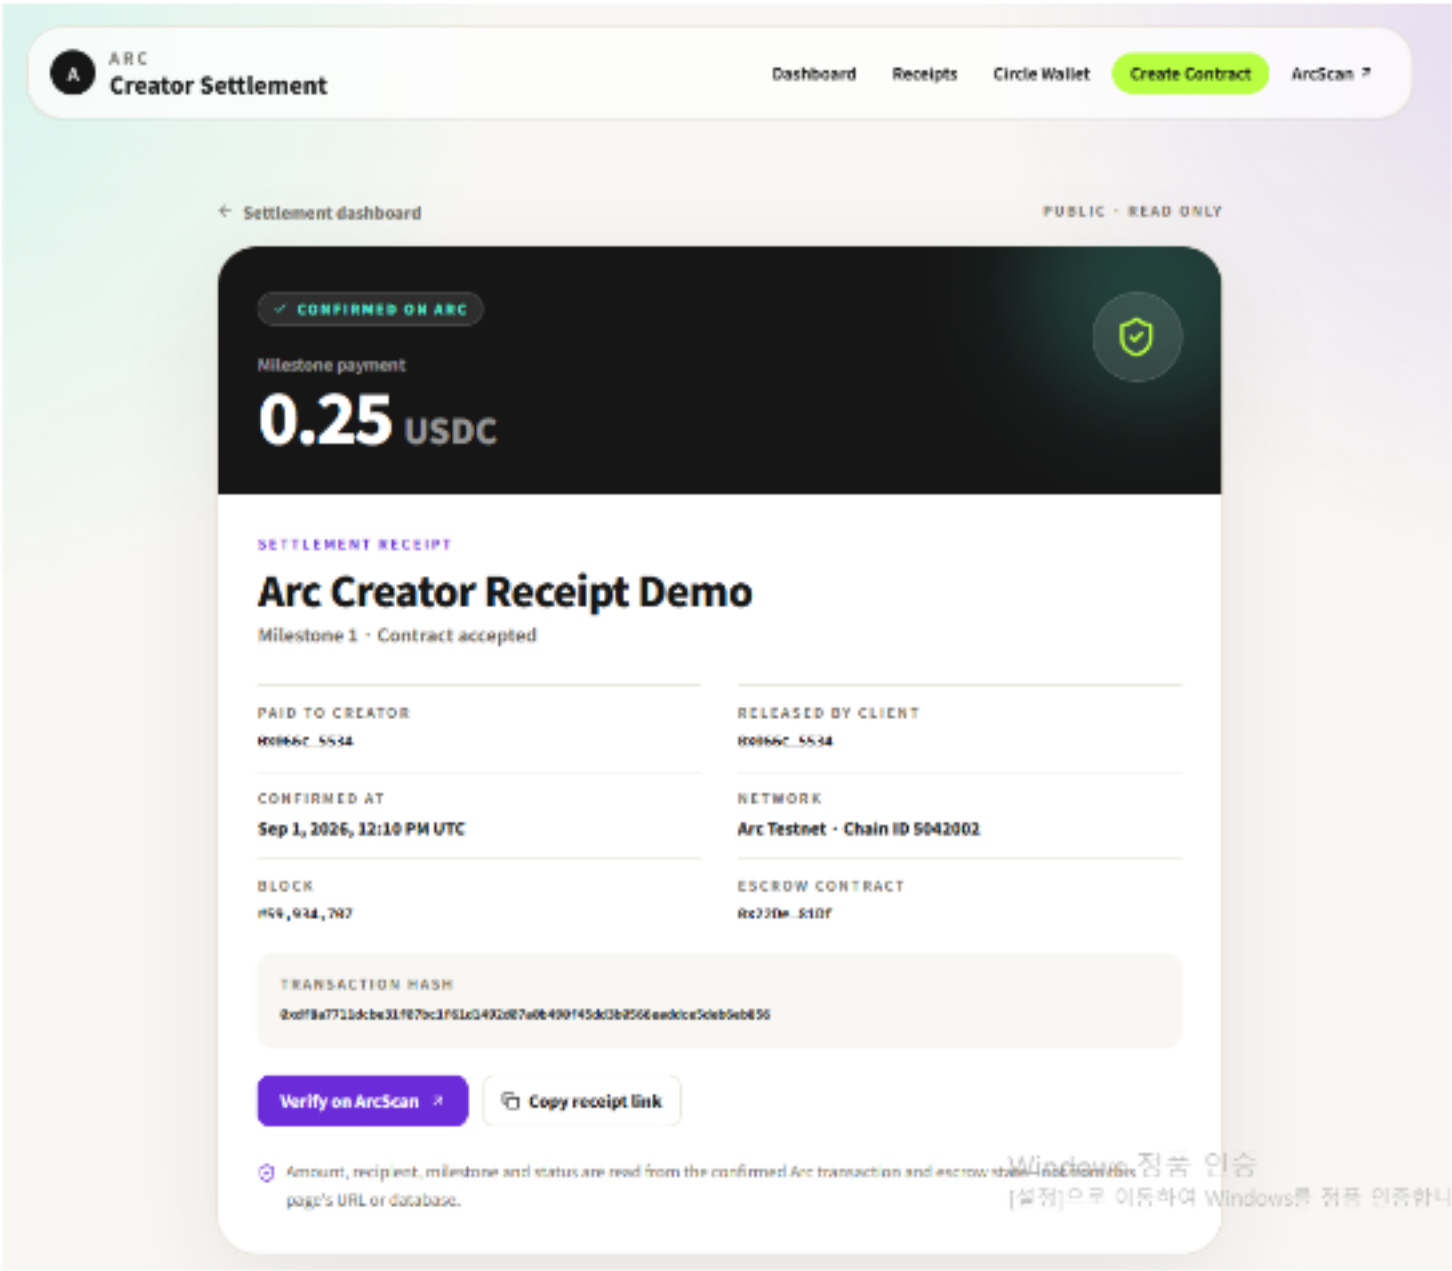

4

Milestones encoded

19 + 2

Web + Solidity tests

A confirmed Arc transaction becomes a readable public receipt

ArcScan independently confirms the USDC transfer

The MVP is a product surface, not a contract-only demo

01 Circle Wallet

Reload or create a user-owned Arc wallet and display USDC balance.

02 Settlement dashboard

Approve, deposit, submit, and release each milestone.

03 Public receipts

Share a read-only link that anyone can verify against ArcScan.

04 Recovery-safe setup

Entity-secret recovery workflow is tested and excluded from Git.

The next grant phase converts proof into reusable infrastructure

0–4 weeks

Harden settlement

Role checks, state validation, failure UX, deterministic deployment.

4–10 weeks

Add observability

Indexed events, operational views, reusable marketplace APIs.

10–18 weeks

Prototype funding

Circle Gateway exploration for cross-chain USDC entry.

18–30 weeks

Review + pilot

Focused security review and controlled creator marketplace pilot.

Outcome: a settlement primitive that marketplaces can integrate—not another closed payment ledger.

The proof exists. Now make it reusable.
